BBOT: Bridges Brief Observation Tool

The BBOT is a brief evaluation tool to provide students with feedback on skills you observe in the clinical setting. The BBOT can be accessed through MedHub (on-line evaluation platform). Typically the student will set this up so you get an email and it shows up in your task list.

You can also initiate a BBOT yourself. Under the “evaluations” tab, click on “Initiate Performance Evaluation of a Student”

Follow the instructions on the screen to select the student you would like to leave feedback for and hit “submit”; this opens an evaluation form. You can choose the skill observed, and leave brief feedback comments. This should be a written version of what you discussed with the student.
