Multimodal Intergenerational Social Contact Intervention (MISCI)

Welcome to the main project page for MISCI. The Multimodal Intergenerational Social Contact Intervention (MISCI) is a primary risk reduction strategy to address loneliness and social isolation by matching older at-risk adults with local adolescents and young adults. At maturity, MISCI will be personalized, comprehensive, low-cost, scalable, and culturally adaptable with multiple modes of social contact focused not only on Creative Engagement (MISCI-CE), but also on other risk reduction strategies like Physical Exercise (MISCI-PE), and Healthy Meals (MISCI-HM).

Please see the pages below for more information about our current pilot focused on developing programs for MISCI-Creative Engagement and resources about our team, our approach, and our vision for the future.
