

Useful curl Commands

Setting a Header

```
curl -H 'Content-type: application/xml' http://infosvcptr.library.ucsf.edu/shuttle/list/locations
curl -H 'Content-type: application/x-javascript' http://infosvcptr.library.ucsf.edu/shuttle/list/locations
```

POST params

```
curl -d "hi=there&my=friend" <url>
```

Follow Redirects

```
curl -L --insecure https://lr-cle.library.ucsf.edu/ucsf-guests/security/shibboleth
```

Also, the `--insecure` means to trust the SSL cert, as, in this case, it is self-signed.

POST with Headers and Data from file

```
curl -X POST --data @dsm1-request.xml -H "Content-Type: text/xml" -H "Authorization: Basic <base64-encoded bind
dn and password>" https://eds-test.ucsf.edu/dsm1/DSM1Servlet
```
