

Run Fitness Schedule Updater Manually

To run the Fitness & Recreation updater manually, do the following:

```
ssh into drupal-prod.library.ucsf.edu
```

Once logged in, do the following:

```
sudo rm /tmp/xpiron_schedule_data.csv  
cd /web/mobile-prod/htdocs/system/supporting/fitness/bin  
./get_schedule.sh  
./run_fitness_schedules_updater.sh
```

You will get output, and it should look something like this:

```
Starting Fitness Schedule Updater...  
Line count of Xpiron file is sane (115), so deleting current records.  
Lines updated: 114 (Note: First line of Xpiron file is a header.)  
Fitness Schedule Updater finished.
```

If you get an error, then it is possible that the Xpiron file did not download properly.

To test the data, go to the Fitness & Recreation All Classes page:

<http://m.ucsf.edu/fitness/schedule/all>

And you should see data for today, tomorrow, and the next day.
