

Install mod_jk on CentOS

- [Overview](#)
- [Download](#)
- [Install Supporting Tools](#)
- [Install mod_jk](#)
- [Configure Apache](#)

Overview

This document explains how to install mod_jk on CentOS.

Download

Download the latest Apache connectors:

```
http://tomcat.apache.org/connectors-doc/
```

Install Supporting Tools

If the `httpd-devel` tools are not installed, install them first:

```
sudo yum -y install httpd-devel
```

Install mod_jk

Untar/gz the download, and do the following:

```
cd native/  
./configure --with-apxs=/usr/sbin/apxs  
make  
sure make install
```

Configure Apache

The following is an example config for mod_jk:

In `httpd.conf`:

```
LoadModule jk_module modules/mod_jk.so  
...  
JkWorkersFile conf.d/workers.properties  
JkLogFile logs/mod_jk.log  
JkLogLevel debug
```

In `vhost`:

```
JkMount /* worker1
```
